

FET AMPLIFIER

MODEL - AMP32

This board has been designed with a view to provide practical and experimental knowledge of FET amplifier On SINGLE PCB.

SPECIFICATIONS

1. Built-in Power supply : +15V at 50mA IC Regulated & short circuit protected
2. Power requirement : 230V, 50Hz AC.
3. Following parts provided on Single PCB with connecting terminals.
FET Transistor BFW11
4. Standard Accessories :
 1. A manual having practical details.
 2. Patch Cords.
5. Experiments:
 - To measure the voltage Gain.
 - To Plot the frequency response characteristics.
 - To find out the Input Impedance.
 - To find out the Output Impedance.

In keeping view of SIGMA policy of continuous development and improvement, the Specifications may be changed without prior notice or obligation.
