

# BREAD BOARD TRAINER

## MODEL BBDM100

This trainer has been designed with a view to verify truth table of logic gates and address and to construct small digital circuits and perform various experiments.

### SPECIFICATIONS

- |                               |   |
|-------------------------------|---|
| 1. Power supply               | : 230V Ac, + 10 % single phase, 50Hz.                                       |
| 2. Built in Power Supply      | : +5 VDC, 500mA   |
| 3. Pulse generator            | : Variable from 1 Hz to 1KHz in 3 ranges for triggering TTL circuits.       |
| 4. Breadboard                 | : 2 strips 175mm long with 1280 tie points                                  |
| 5. High /Low switches         | : 8 Nos provided to apply 0 and 1 level                                     |
| 6. Pulsar                     | : 1 No. provided to apply pulses.   |
| 7. Logic Level Indicator LEDs | : 8 Nos. provided for output /input level indication.                       |
| 8. Display                    | : 2 No seven segment display LED with decoder 7447                          |
| 9. Standard Accessories       | : 1. A Instructional Manual. - 1 No.<br>2. 2mm Connecting jumpers - 10 Nos. |

In keeping view of SIGMA policy of continuous development and improvement, the Specifications may be changed without prior notice or obligation.
